

Seamus Hennigan

Cybersecurity student at Johnson & Wales University, pursuing a B.S. in Cyber Threat Intelligence & Defense (Graduating May 2028). Treasurer of the National Cybersecurity Student Association, coordinating events and managing organizational resources. Passionate about network defense, cloud security, and malware analysis. Experienced with Python, SQL, C, Linux, and penetration testing tools including networking tools and environments like Wireshark, Cisco IOS. Currently developing the *Signal-Keylogger* project to explore secure communication, encryption, and real-time data monitoring. I am dedicated to advancing modern cybersecurity practices and contributing to secure infrastructure solutions.

EXPERIENCE

Johnson & Wales University, Providence, RI January 2026

Assistant Network Technician

- Supported campus network operations by ensuring reliable end-user connectivity and overall system performance.
- Responded to service desk tickets related to both data and voice networking issues.
- Diagnosed and resolved wired and wireless network problems, including testing and troubleshooting data jacks and Wi-Fi access points.
- Configured network switches, access points, and end-user devices to meet university standards.
- Maintained network closets, ensuring organized cabling, proper equipment function, and clean environment.
- Patched network jacks into appropriate switch ports during new deployments or troubleshooting.
- Installed, configured, and tested VoIP phones, headsets, and related hardware.
- Replaced faulty or degraded networking equipment across campus as needed.
- Assisted with large-scale campus networking initiatives, including upgrades, new installations, and access-point rollouts.

Projects

Signal-Keylogger (2024-2026):

- Developed a custom keylogger application in Python/PyQt5 with SSL-secured client-server communication
- Implemented real-time monitoring of multiple clients with a GUI for displaying Keystroke, system info, and geolocation data
- Engineer to highlight the interaction of encryption, client-server protocols, and user interface design

WeatherETL (2026-Present):

- Built a serverless ETL pipeline to collect real-time weather data
- Automated data ingestion using AWS lambda and Event Bridge
- Stored and queried processed data using PostgreSQL for analysis and visualization

PERSONAL INFO

81 Angell Road
Cumberland, Rhode Island
(401)-258-7159

PROFESSIONAL SKILLS

Languages:
Python, C, SQL
Operating Systems:
Kali Linux, Ubuntu, Arch, Windows 10-11
Networking:
Cisco, Putty, Wireshark
Cloud Environments:
Microsoft Azure, Amazon Web Services
Security Tools:
Ghidra, John the Ripper, Hashcat, Burp suite, Nmap, Metasploit
Command-Line Environments:
Cisco IOS Command Line interface, Windows Command Prompt, Linux Terminal (Bash/Zsh)
Databases:
MySQL
Platforms:
PC
Virtualization:
VirtualBox, VMware
Repository System:
GitHub
IDE:
Visual Studio, Windows PowerShell ISE, PyCharm, MySQL Workbench

EDUCATION

Johnson & Wales University,
Providence, RI
Bachelor of Science in Cyber Threat Intelligence & Defense
Expected Graduation: May 2028
Involvement: Treasurer, National Cybersecurity Student Association
